

## **Alpine Cyber Solutions Partners with Philadelphia Area Hospitals to Strengthen Cyber Security**

**Pottstown, PA, April 28, 2016** – [Alpine Cyber Solutions](#), a leading cyber security and cloud infrastructure company, today announced partnerships with two community hospitals in the Greater Philadelphia area. To manage and combat increased cyber security risks facing healthcare providers today, the Company will strengthen the hospitals' computer systems with managed cyber security and vulnerability assessment services.

The managed cyber security services for one partner hospital, located in Berks County, spans network threat management, email encryption and protection, modern endpoint protection, web content filtering and vulnerability management, with an increased focus on anti-phishing services.

Alpine is partnering with [PhishMe](#)<sup>®</sup>, a SaaS provider of threat management for organizations concerned about human susceptibility to advanced targeted attacks.

"We are incredibly pleased to not only partner with two of the Delaware Valley's leading hospitals, but to leverage the inclusive methodology of PhishMe," said Steve Pressman, President of Alpine Cyber Solutions. "Any opportunity to educate and engage users in defense measures can lead to the significant reduction of cyber security threats, and the added protection of patient health information."

The additional hospital, located in Montgomery County, will receive vulnerability assessment services to gauge the real-world effectiveness of its existing cyber security program. The tests identify risks of internal and external threats/intrusions, and allow Alpine Cyber Solutions to recommend modern countermeasures in accordance with stringent healthcare and HIPAA regulations.

"Vulnerability assessments are a fundamental exercise for realizing how secure a network really is," said Pressman. "As hospitals and other organizations with proprietary data continue to be targeted, it's critical that companies make this exercise an operational priority on a regular basis, or every time a significant change to their system is made."

Alpine Cyber Solutions provides decades of experience reducing and responding to cyber threats, by delivering preemptive solutions and IT intelligence. The Company combines its high value services including, managed security, incident response, vulnerability analysis, cyber security solutions, staff augmentation and security awareness training, with best-in-class products from Cyphort, FireEye, Cisco, McAfee, BlueCoat and Carbon Black, among others.
