

DEVSECOPS AS A SERVICE

ALPINE CYBER

Managed Security, Cloud & IT Services

WWW.ALPINECYBER.COM

DevSecOps [dev-SEC-ops]

noun: The practice of integrating security testing at every stage of the software development process

BENEFITS

- Adds Security to Each Phase of the Software Development Lifecycle (SDLC)
- Drives Defects to the Left: Security Bugs are Found Earlier
- Application Maintenance Cost and Reliability Improve

PLAN

- We build you a DevSecOps strategy from the ground up
- We can also add security and automation to your existing SDLC
- Based on the OWASP DSOMM, we give you the plan to add testing or analysis to every requirement, commit, build, and deployment

BUILD

- We implement your new Threat Modeling process, SAST/DAST/IAST, SCA, automated testing, production monitoring, and more
- We don't just talk about improving your pipeline - we bring the best of breed solutions to the table and make it happen!

RUN

- We are part of your SRE/Ops team
- We handle triaging your security findings, training your staff, and monitoring your KPIs
- We make everyone on your dev and deployment teams better from the inside
- We make sure your code is deployed without a hitch

YOUR NEXT PRODUCTION SECURITY BUG IS AVOIDABLE

TESTIMONIAL

"We first engaged with Alpine in 2021 to help assess our cloud-based application's security including vulnerability and penetration testing. Since then, the Alpine team has become a trusted partner to support our rapidly growing business, providing valuable insights and guidance to both our security and DevOps processes. With an enhanced pipeline and robust infrastructure, Alpine's DevSecOps team is enabling us to scale quickly and efficiently, while increasing our app reliability and providing the peace of mind we need in our highly regulated industry."

KEVIN WILLIAMS

Head of Clinical Solutions, Ledger Run, Inc.

WHO WE ARE

Born in the defense industry and hardened by years on the front lines, Alpine Cyber is a full service cybersecurity, cloud, and IT service provider with firsthand knowledge of what it takes to keep your code and apps safe.

We help you govern, identify, protect, detect, respond and recover - everything you need to be secure in a threatening, connected world.
